Trainers tab — quick guide

Log training sessions, score MS Forms evaluations, and print trainer reports in RCT OpsDesk.

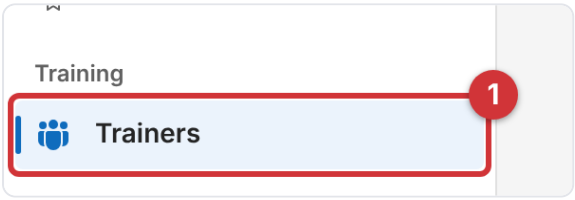

Before you start

- **Training tracker** (.xlsx) with the columns *Date, Trainer, New Code, New Description, Client, Time Start, Time End*. The app fills in *Net Promoter Score, Trainer Score, Responses* and *Eval Source* for you.
- **Evaluation exports** from MS Forms (.xlsx), one file per session. Name them with the date, AM/PM and school, e.g. `Training Feedback Form - Sep. 23, 2026 [RSHS] - PM.xlsx`, so they match automatically.
- Use **Chrome or Edge**. A linked folder lets the app read your files and save into the tracker in place.
- Answers stay in this browser tab. Nothing is uploaded.

In this guide

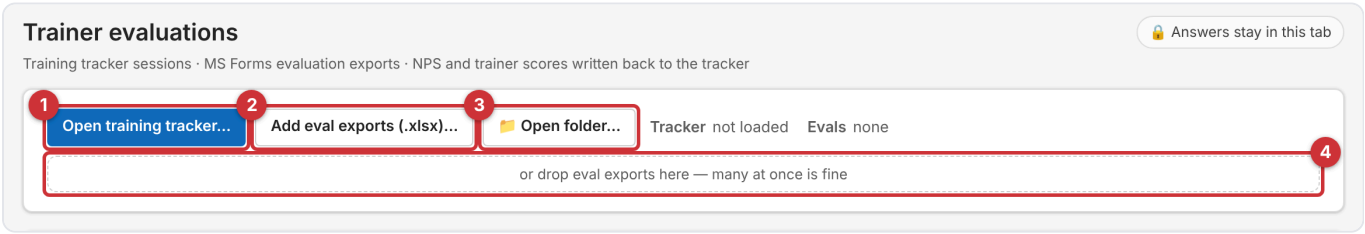

1. Open the Trainers tab
2. Load the tracker and evaluations
3. Add evaluations (score a session)
4. Add a training log (new session)
5. Reports: sessions, summary, trainer profile
6. Quick answers

1 Open the Trainers tab

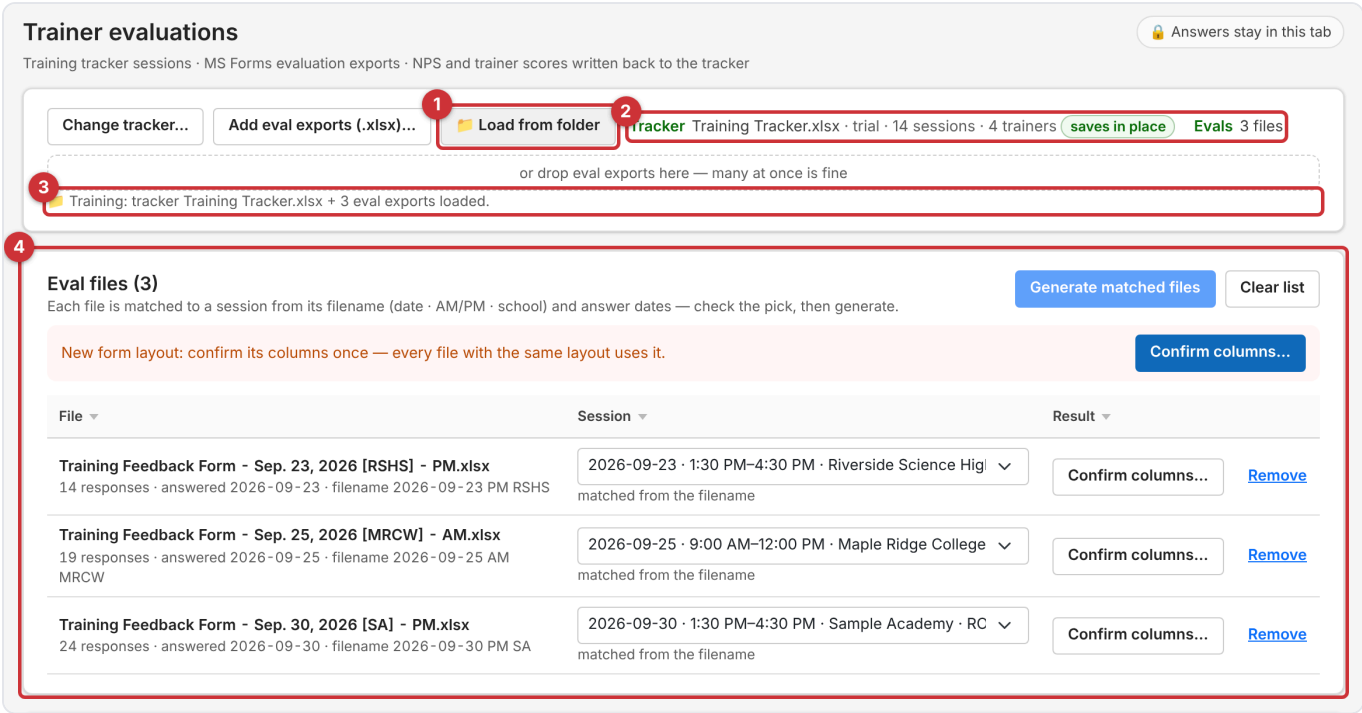

1. In the left menu, under **Training**, click **Trainers**.

2 Load the tracker and evaluations

1. **Open training tracker...** picks your tracker workbook.
2. **Add eval exports (.xlsx)...** adds one or many evaluation files.
3. **Open folder...** (fastest) links the folder that holds the tracker and the evaluations. The app finds both on its own.
4. Or drag evaluation files onto this area. Many at once is fine.

Using a linked folder

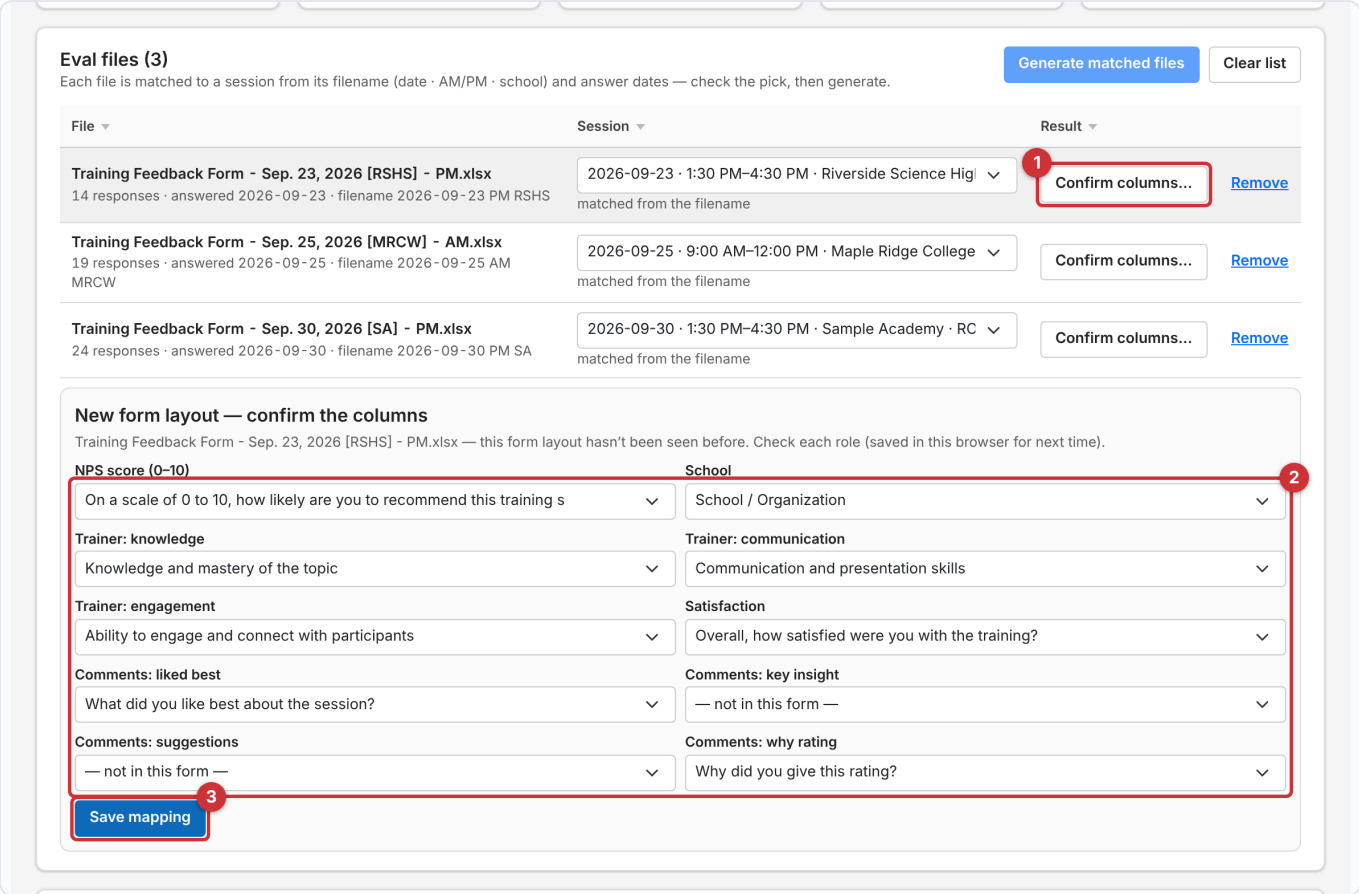

1. After the first link the button becomes **Load from folder**. Click it to pick up new files. Files already loaded are not added twice.
2. Shows the tracker in use. **saves in place** means results are written straight into that file.
3. Says what was found in the folder.
4. The evaluation files are listed and ready to match.

> The tab reloads the linked folder by itself when you open it. Chrome may ask once per session to allow the folder.

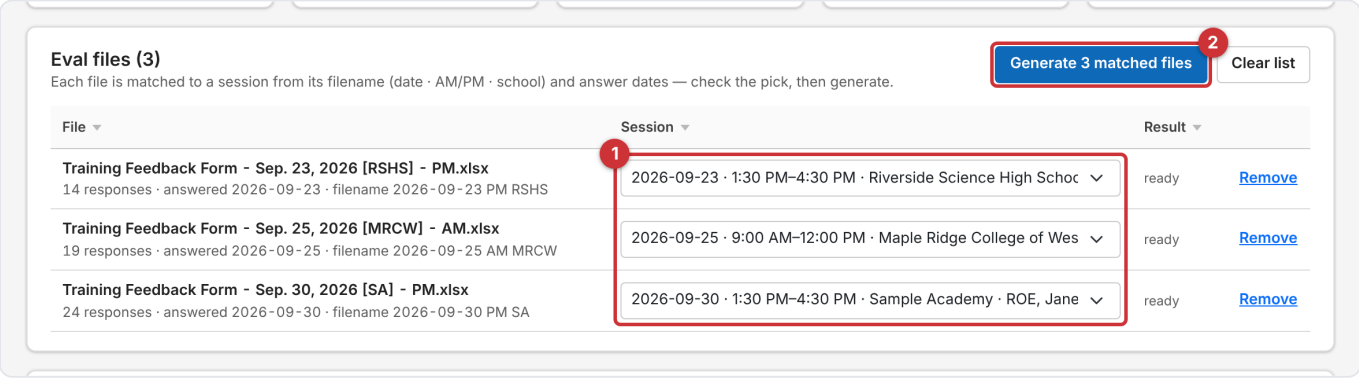

3 Add evaluations (score a session)

3a · Confirm the form columns (first time only)

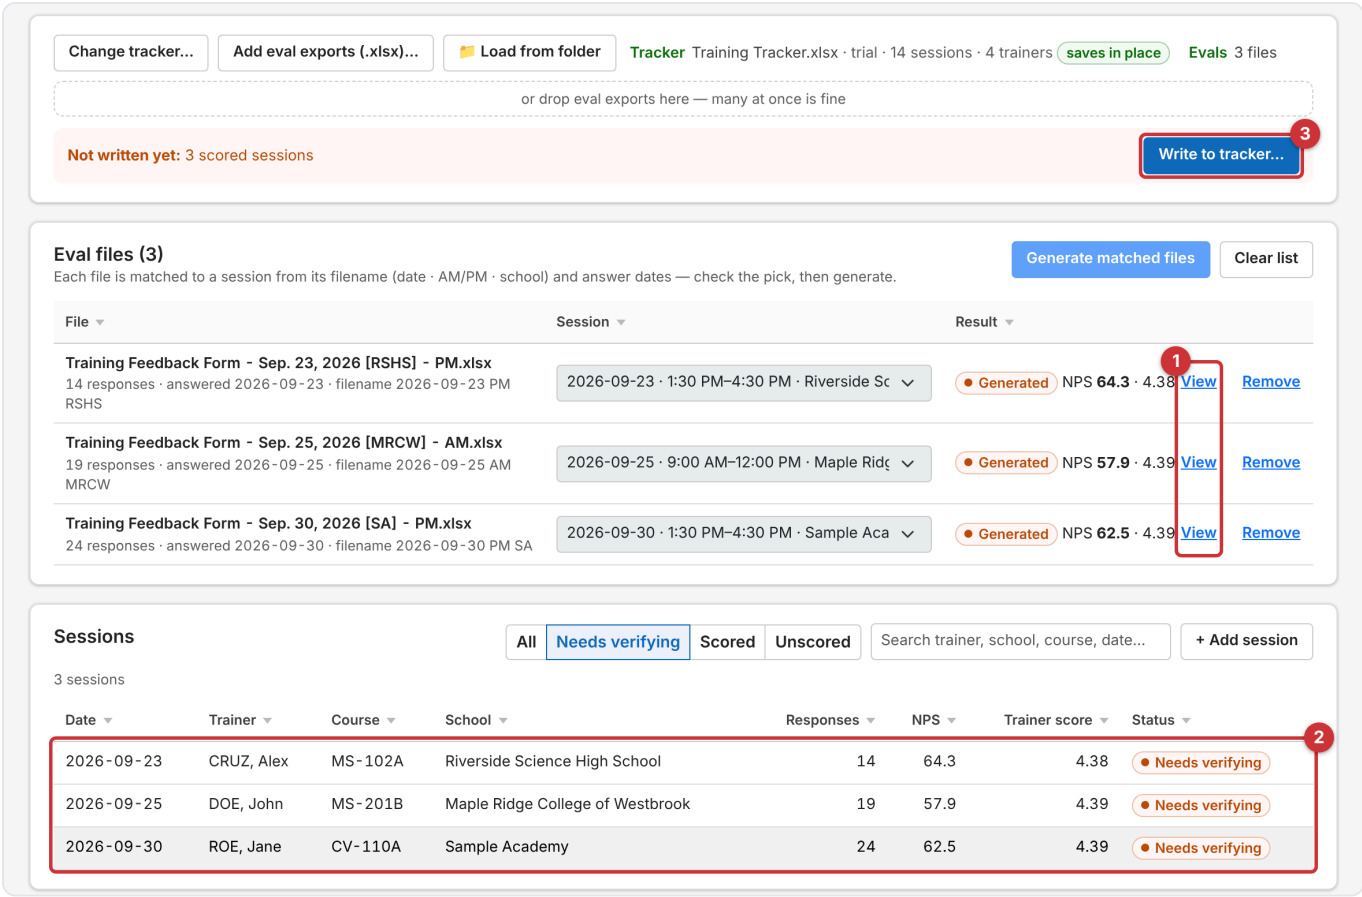

1. A new form layout asks for **Confirm columns…** once.
2. Check that each role (NPS 0–10, school, trainer knowledge / communication / engagement, satisfaction, comments) points to the right question. Pick — *not in this form* — if a question isn't there.
3. **Save mapping**. Every file with the same layout reuses it.

3b · Check the match, then generate

1. Each file is matched to a session using the date, AM/PM and school in its filename, and the answer dates. Change the pick here if it's wrong.
2. **Generate N matched files** computes NPS and trainer scores for all of them.

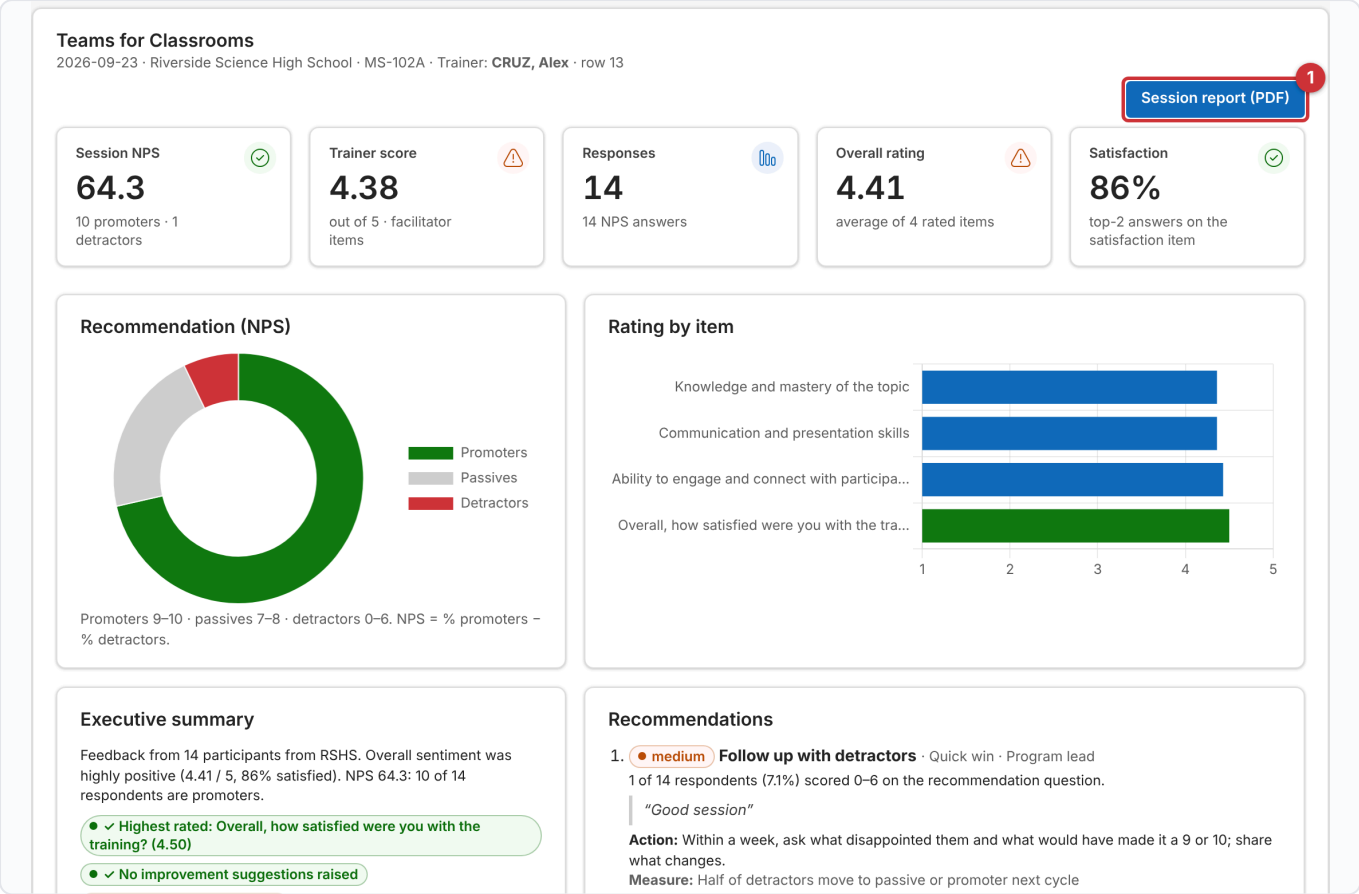

3c · Review and write to the tracker

1. **View** opens the feedback report for that session (see 3d).
2. Scored sessions show **Needs verifying** until they are written to the tracker.
3. **Write to tracker...** lists every change (row, NPS, trainer score) and asks before saving. It writes NPS, Trainer Score, Responses and Eval Source on the session's own row.

> If the tracker isn't linked, or it changed in Excel after you opened it, an updated **copy is downloaded** instead. Replace your tracker with that copy.

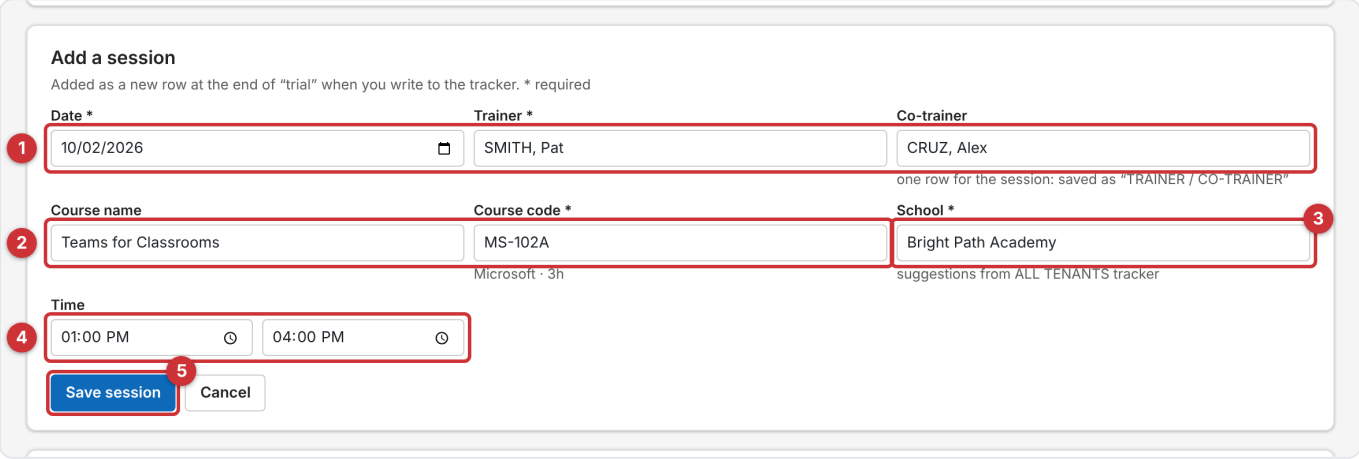

3d · Session feedback report

1 **Session report (PDF)** opens the print dialog. Choose **Save as PDF**. The report shows NPS, ratings per item, an executive summary, recommendations, themes and comments.

4 Add a training log (new session)

Click **+ Add session** above the Sessions table, then fill in the form.

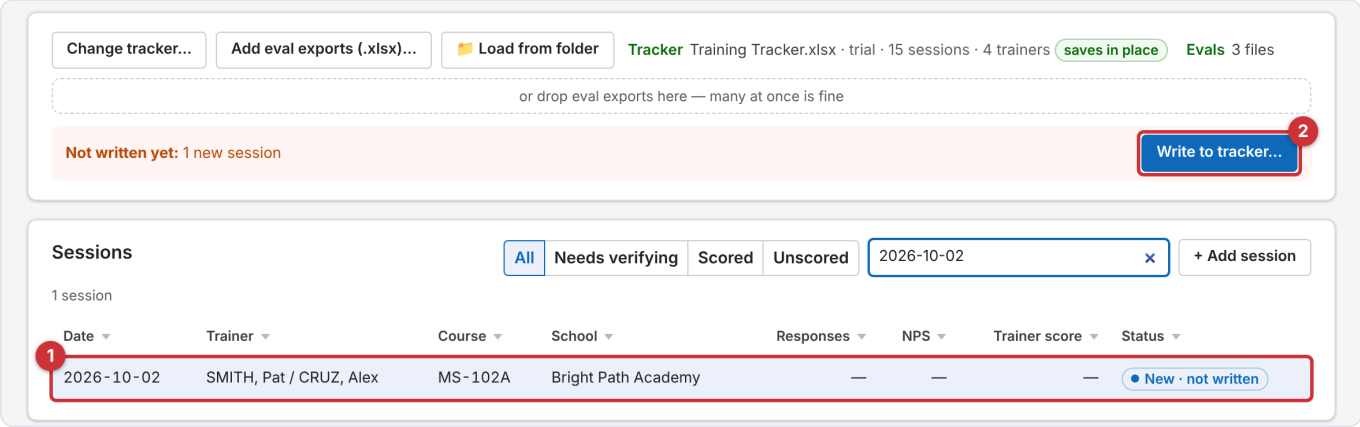

1 **Date** and **Trainer** are required. Add a **Co-trainer** for a shared session. It is saved on **one row** as `TRAINER / CO-TRAINER`, e.g. `SMITH, Pat / CRUZ, Alex`.

2 Start typing the **Course name**. The **Course code** fills in from the tracker's course list.

3 **School**: type or pick. Suggestions come from the tenant tracker.

4 Start and end **time**. They are used for training hours and for AM/PM matching.

5 **Save session** adds it to the list. Nothing is saved to the file yet.

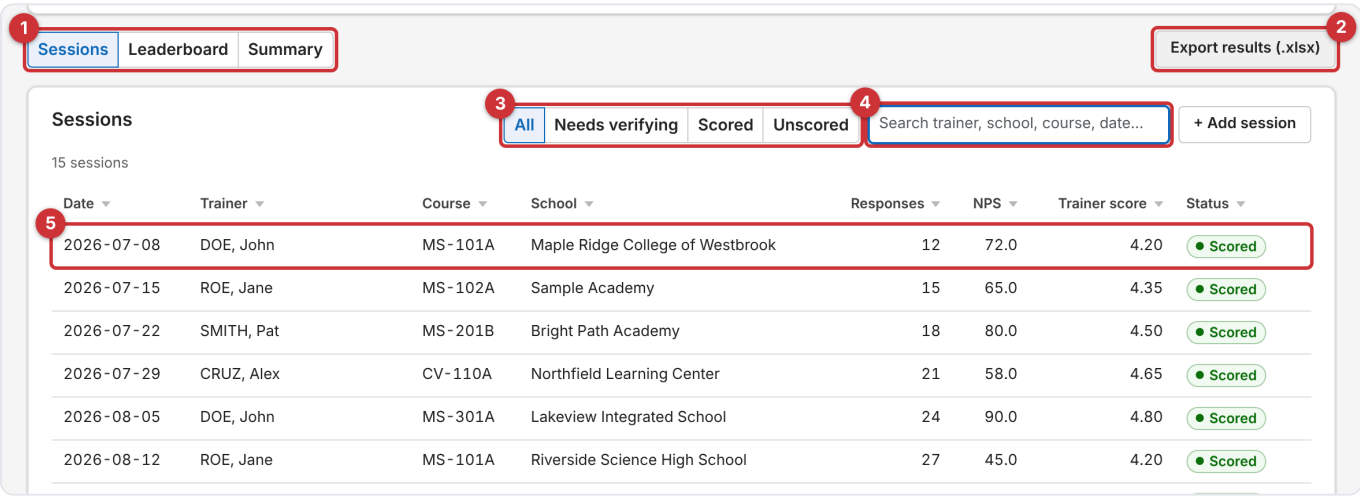

1. The new row shows **New · not written**. You can still remove it.
2. **Write to tracker...** adds it as a new row at the end of the tracker sheet. Its evaluation can then be added as in step 3.

> The same date, school, course and start time on two rows is flagged as **Possible duplicate sessions**. Use one row with both trainers instead of one row per trainer.

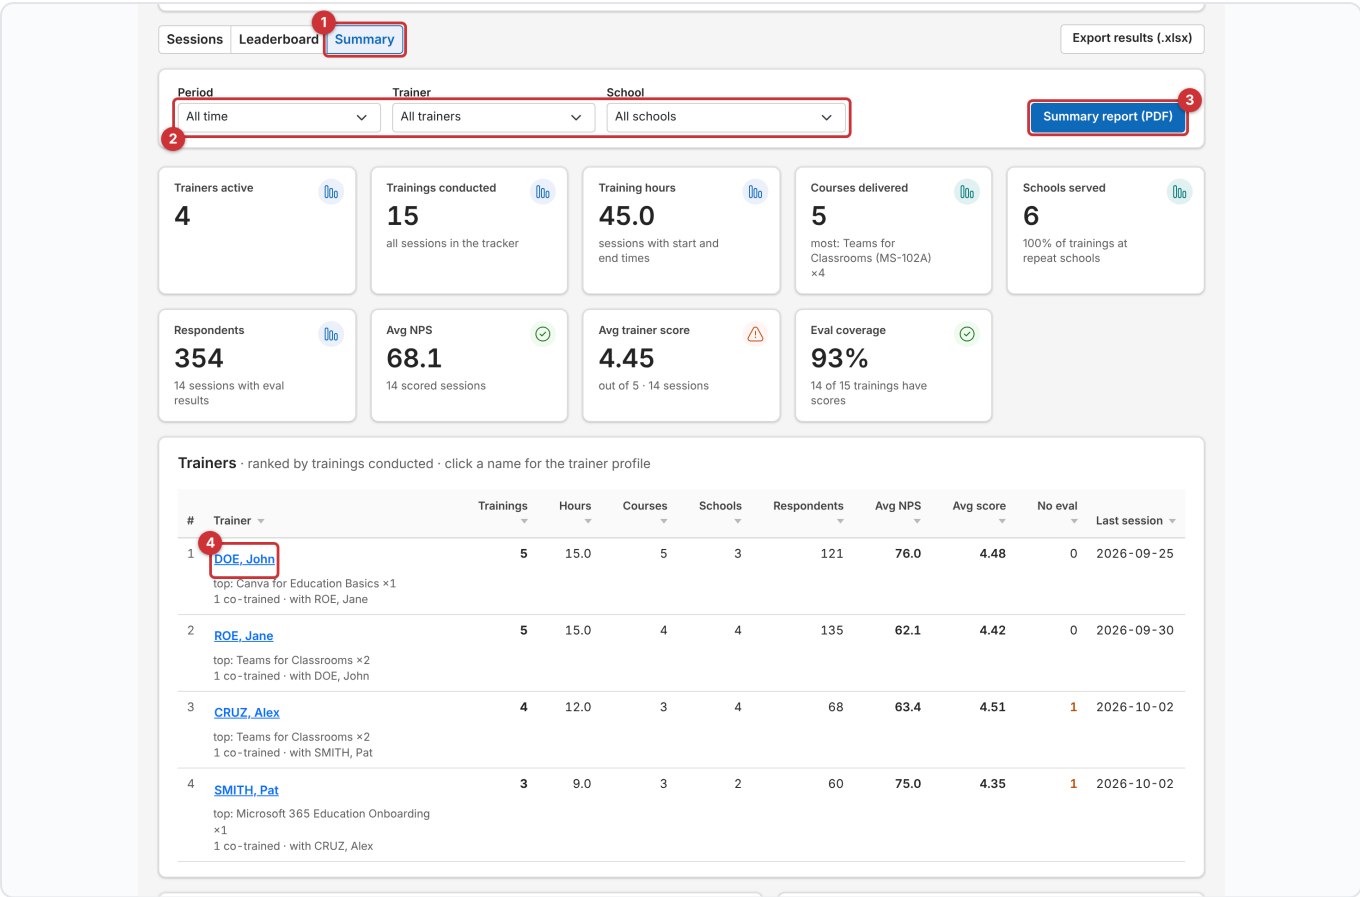

5 Reports

5a · Sessions view

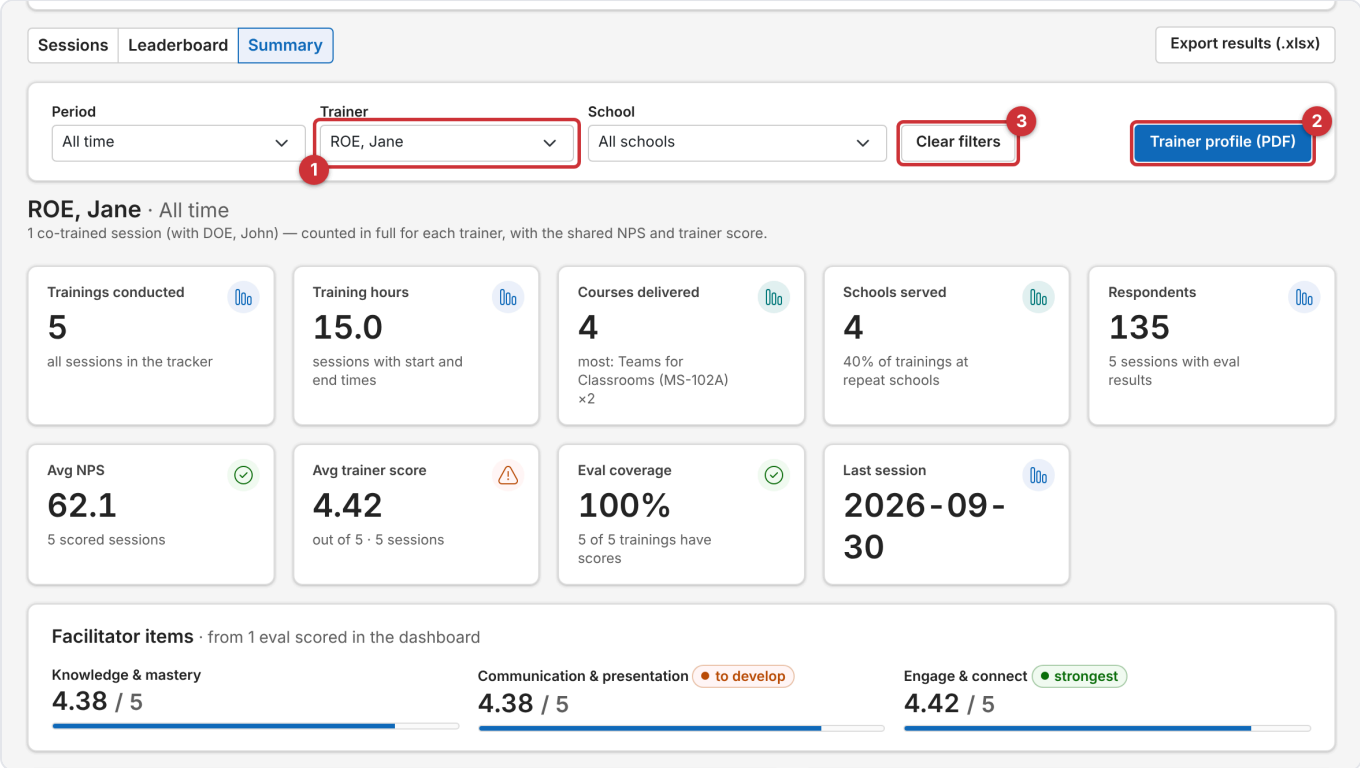

1. Switch views: **Sessions**, **Leaderboard** (ranking by NPS and trainer score), **Summary**.
2. **Export results (.xlsx)** downloads all sessions with their scores.
3. Filter by status: *Needs verifying*, *Scored*, *Unscored*.
4. Search by trainer, school, course or date.
5. Click a row for its details. **Add eval for this session...** attaches an evaluation file directly.

5b · Summary report

1. Open **Summary**.
2. Filter by **Period** (year or quarter), **Trainer** and **School**. Tiles, tables and charts follow the filters.
3. **Summary report (PDF)** prints the summary. Choose **Save as PDF**.
4. Click a trainer's name to open their profile.

5c · Trainer profile

1. The **Trainer** filter is set to that person. Co-trained sessions count in full for each trainer.
2. **Trainer profile (PDF)** prints the profile, with strongest and to-develop facilitator items and courses conducted.
3. **Clear filters** returns to the full summary.

6 Quick answers

An eval shows "Already encoded"	That file was already written to the tracker (recorded in *Eval Source*). It is not scored twice. Tick **Replace existing score** only to overwrite on purpose.
A file matched the wrong session	Pick the right session in the file's **Session** list before you generate. Putting the date, AM/PM and school in the filename makes matching reliable.
Responses show "—"	That session has no response count in the tracker yet. Adding its eval and writing it fills *Responses*.
Nothing changed in my tracker	Results are saved only after **Write to tracker…**. Watch for the orange **Not written yet** bar.
Got a download instead of a save	The tracker wasn't linked, or it changed in Excel meanwhile. Use the downloaded copy, or link the folder and write again.
